

**A DEEP LEARNING MODEL FOR MICROPLASTICS DETECTION IN OPEN  
SEWER SYSTEMS**

**JOSEPH MICHAEL ODHIAMBO**

**A THESIS SUBMITTED TO THE INSTITUTE OF COMPUTING AND  
INFORMATICS IN PARTIAL FULFILLMENT OF THE REQUIREMENTS  
FOR THE AWARD OF THE DEGREE OF MASTER OF SCIENCE IN  
INFORMATION TECHNOLOGY OF THE TECHNICAL UNIVERSITY OF  
MOMBASA**

**2023**

## DECLARATION

This thesis is my original work and has not been presented for academic award in any other university.

## **DEDICATION**

I dedicate this work to my three daughters, and to my late wife, Vida. They are the inspiration for this work.

## ACKNOWLEDGEMENT

I would like to thank Dr. Mgala Mvurya, Dr. Anthony Luvanda, Dr. Mwakondo, Dr. Kennedy Ondimu, and Dr. Kennedy Hadullo for their direct and indirect contributions to this work. I took a lot of inspiration from their lectures, especially from Dr. Luvanda, Dr. Hadullo, Dr. Mgala, and Dr. Mwakondo, who were the first objective critics of this topic and helped shape it up to this standard. I cannot forget Dr. Obadiah Musau who accompanied me during data collection exercise and provided very valuable insights into my research.

I would also like to thank Mr. Bernard Onyango, a classmate who encouraged me to pursue higher education. His faith in me has motivated me to take on this task. Onyi (that's his pet name), you're a true friend, and I thank you very much for seeing something good in me. I would also like to thank the other members of my master's class, especially Asnath Nyachiro. She has been by my side through thick and thin, even when we thought we couldn't make it. She encouraged me to keep on working hard and harder. I am grateful to you and others for your insightful comments, which have helped shape this thesis into what it is today.

In a special way, I want to appreciate the Technical University of Mombasa through Registrar PRI for grant that made my data collection and publication a smooth process. Last but not least, I want to thank the Almighty God for bringing me this far and for allowing me to complete this thesis and graduate with a masters of science degree in information technology. Thank you very much, Lord.

## LIST OF ACRONYMS AND ABBREVIATION

AI	Artificial Intelligence
ANN	Artificial Neural Networks
API	Application Programming Interface
ATR	Attenuated Total Reflectance
CNN	Convolutional Neural Networks
CONV	Convolutional layers
ConvNet	Convolutional Neural Network
CRISP-DM	Cross Industry Standard Process in Data Mining
CSO	Combined Sewer Overflow
CSV	Comma Separated Value
DNN	Deep Neural Networks
Dr.	Doctor
DSC	Dice Similarity Coefficient
FTIR	Fourier Transform Infrared
GRU	Gated Recurrent Units
IoU	Intersection over Union
KDD	Knowledge Discovery in Databases
k-NN	k Nearest Neighbor
LSTM	Long Short Term Memory
ML	Machine Learning
MPs	Microplastics
NOAA	National Oceanic and Atmospheric Administration Open Center for the Characterization of Advanced
OCCAM	Materials
PP	Polypropylene
QA/QC	Quality Assurance and Quality Control
RDF	Random Decision Forest

ReLU	Rectified Linear Unit
RNN	Recurrent Neural Network
SEMMA	Sample, Explore, Modify, Model and Assess
SIFT	Scale Invariant Feature Transform Algorithm
SVM	Support Vector Machine
TUM	Technical University of Mombasa
USR	Untreated Surface Runoff
UV	Ultra Violet
WWF	Waste Water Effluent
WWTPs	Waste Water Treatment Plants

## DEFINITION OF KEY TERMS

Artefact	Artifact is a piece of creativity showing human workmanship. In this study artifact means a model.
Artificial Intelligence	The creation of computer systems with capabilities of activities that often require human intelligence, such as visual perception, is what is referred to as artificial intelligence, or simply AI.
Artificial Neural Networks	An artificial neural network simulates the network of neurons or nodes that comprise the human brain, allowing the computer to learn and make decisions in the same manner humans make decisions. It is a method of programming ordinary computers to behave like interconnected brain cells.
Blue Economy	The use and preservation of the marine environment are considered to be part of the "blue economy" in terms of economics. It is typically used to represent a sustainable development approach to coastal resources in the context of international development.
Convolution Neural Networks	Convolutional Neural Network is an algorithm of Deep Learning method that receives input images, assigns relevance in terms of learnable weights and biases to distinct parts of the image, and may extract differences from those features (ConvNet or CNN).
Deep Learning	A subtype of artificial intelligence known as deep learning, comprises networks that can learn unsupervised from unstructured data or random data. Deep Learning is often referred to as Deep Neural Networking or Deep Learning.
Deep Neural Networks	Deep Neural Networks (DNN) consist of neurons, synapses, weights, biases, and functions as components just like neural network of the human brain. Between the input and output levels, these construct several layers, resulting in an artificial neural

network (ANN).

Ecosystem	An ecosystem means an environment within which a complex coexistence of a community of interacting organisms and their relationships in unit space.
Indian Ocean	The Indian Ocean borders Africa on the eastern side, Australia to the western side and Asia on the southern side. It is among the largest of the five oceans in the world, with a total of 70,560,000 km <sup>2</sup> (19.8%) of water coverage on the surface of the Earth.
Machine Learning	An area of artificial intelligence is called machine learning (ML). Making machinery capable of mimicking intelligent human behavior is what this technique is all about. Machines with ML capabilities can carry out complex jobs almost as well as people can (expert.ai).
Macroplastics	Macroplastics are large particles of plastics ranging in different sizes, basically, more than 5 mm, which can be seen and picked easily. Macroplastics are in the marine environment and on land.
Microplastics	Microplastics (MPs) are small and tiny particles of big plastics not more than 5 mm in length. The breaking apart of the Macroplastics is attributable to natural causes like wind, sun, and other causes. Most of the products we use at home like facial scrubs, toothpastes, etc also contain tiny pieces of Microplastics, known as microbeads.
Open Sewer	The main sources of sewage waste water include the kitchen, dishwashers, washers, bathrooms, and toilets. Drains, pipes, and manholes are all part of the sewerage system, which transfers waste water to a sewage treatment facility.

Recurrent Neural Networks  
Recurrent Neural Network (RNN) is a type of Artificial Neural Network and a Deep Learning technique. This approach is frequently used in object detection and classification on images. Recurrent neural networks recognize the sequential properties of data to forecast the next likely scenario.

TensorFlow  
TensorFlow, an open-source platform for Machine Learning, accepts inputs as a complex structure of data called Tensor. It uses data flow plots to construct models, enabling designers to create large-scale neural networks with many layers.

## ABSTRACT

Microplastics (MPs) are small plastic particles that pose a threat to aquatic organisms and human health. Detecting MPs in bodies of water is critical for controlling their flow and limiting their negative effects. This study proposes a Deep Learning algorithm for detecting MPs in photos taken from open sewer systems that flow into the ocean. The research adopted the Sample, Explore, Modify, Model, and Assess (SEMMA) framework, a comprehensive data mining process. A dataset comprising 1000 photos was constructed from locations in Kilifi, Mombasa, and Kwale counties in Kenya, by employing the Scale-Invariant Feature Transform (SIFT) algorithm for feature extraction. The researchers compared the performance of two object detection models: Sing-Shot Detector (SSD), and Convolutional Neural Network (CNN), and discovered that SSD performed best with a mean average precision (mAP) score of 100%, while CNN performed worst with 96.5%. A model for detecting MPs in photos taken from open sewer systems that flow into the Indian Ocean along Kenya's coast was developed using the best-performing SSD model. The model can be used to detect MPs in other open sewer systems, assisting in the implementation of effective management and control measures. Future research could look into creating a mobile app that captures images and provides information about MPs in open sewer systems.
